

Introduction – The purpose of this note is to provide installation instructions and comments on a patch for the CQ/X Client software. The patch applies to version 1.8.0 of the software and is provided to implement the enhancements and fix the problems described below.

Previous Patches – This is the fourth patch for version 1.8.0. Users of version 1.7.9 that have installed all of the patches for that version and Patch 180-01, 180-02, and 180-03 can apply this patch without downloading version 1.8.0. Other users should first download and install a full copy of version 1.8.0 from www.no5w.com then apply Patch 180-01, 180-02, and 180-03 followed by Patch 180-04.

Installation – In addition to these notes the zip file associated with this patch contains a setup file for automatically installing the patch in C:\ProgramFiles\CWSoft\. **WARNING: Please note that the setup file assumes that you have installed the program in C:\Program Files\CWSoft\.** If this is not the case you can still run the setup but following this you will need to manually copy each of the files to their corresponding directories in your location. Here's a list of the files contained in this patch and a description of where they will be installed.

File	Installation
CQXClient.exe CqxClient.ini CabrilloTags.txt	These are the main executable, a config file, and a file containing the Cabrillo tag definitions. They replace the files of the same name in the main directory which in the standard installation is C:\Program Files\CWSoft\CQXClient\
CWOpsCWT.def	This is the file that defines the properties of the CWOps-MiniCWT contest. It replaces the file of the same name in the CWOps-MiniCWT directory which in the standard installation is a subdirectory of C:\Program Files\CWSoft\CQXClient\ContestDefns\

Problems Addressed/Enhancements – The following problems/enhancements are addressed.

Problem/Enhancement	Description
When the KX3 is selected as the radio the CQ message can not be sent using any key assignment	This problem has been fixed
The URL for 3830 has changed	This problem has been fixed
The permitted bands for the CWOps-MiniCWT have changed	This problem has been fixed
Attempts to use the startup option (Load previous configuration, auto-connect devices, skip wizard) cause a program crash when a GPS is being used.	This problem has been fixed
